$$\begin{aligned} v_\mu &= v_1 \cos \theta + v_2 \sin \theta \\ v_e &= -v_1 \sin \theta + v_2 \cos \theta \end{aligned} \quad (1)$$

$$\begin{aligned} v_2 &= v_e \cos \theta + v_\mu \sin \theta \\ v_1 &= -v_e \sin \theta + v_\mu \cos \theta \end{aligned} \quad (2)$$

Замечание. Мы не знаем, что такое v_1 и v_2 . Мы не знаем θ .

Пусть при $t = 0$ $I_{v_\mu} = 1$, $I_{v_e} = 0$, тогда из (2) $v_1(0) = v_\mu(0) \cos \theta$
 $v_2(0) = v_\mu(0) \sin \theta$ (3)

Запишем (1) во времени $v_\mu(t) = v_1(t) \cos \theta + v_2(t) \sin \theta$ (4)

Временная зависимость
 $v_1(t) = v_1(0) e^{-iE_1 t}$
 $v_2(t) = v_2(0) e^{-iE_2 t}$

Волновая функция $v_\mu(t) = v_\mu(0) \cos^2 \theta e^{-iE_1 t} + v_\mu(0) \sin^2 \theta e^{-iE_2 t}$

$$\frac{I_{v_\mu}(t)}{I_{v_\mu}(0)} = \frac{|v_\mu(t)|^2}{|v_\mu(0)|^2} = \frac{v_\mu(t) v_\mu^*(t)}{|v_\mu(0)|^2}$$

$$(\cos^2 \theta + \sin^2 \theta)^2 = 1 = \cos^4 \theta + \sin^4 \theta + 2 \cos^2 \theta \sin^2 \theta$$

$$I_{v_\mu}(t) = 1 - \sin^2 \theta \cos^2 \theta \times [2 - e^{i(E_2 - E_1)t} - e^{-i(E_2 - E_1)t}]$$
